Extract from the Memo of the Deputy Commissioner of the Bangalore district, received with his letter No. 667, dated 22nd December 1898.

The Amildar of Nelamangala visited Tyamagondlu on the 7th instant and saw only one individual by name Narasimmaiah suffering from plague. He caused the entire population to vacate their houses and to live in sheds outside the village. In a short time the whole town was evacuated, with the exception of a house belonging to a Muhammadan and the Police Station. The Amildar has arranged with the Police Inspector for the watch and ward of the property left in the deserted houses. In the sheds thus erected there were 8 deaths, besides 3 imported cases. The Plague Inspector and the Vaccinator of the Taluk have been deputed to do duty at Tyamagondlu.

2. The whole village of Begur has been evacuated and people are living in sheds outside the village. There have been 25 cases in the sheds and no cases at all for the last 2-3 days.

3. In Jodi (Verkandapur village) there were 20 cases. The village is evacuated and there have been no cases of late.

4. In Nelamangala Kasha there have been 3 attacks and 2 deaths. A girl is now under treatment. The sick were immediately removed to the sheds and their houses duly disinfected. There have been no fresh cases since.

Weekly return of persons inoculated in the City of Bangalore during the week ending 30th December 1898.

Extract from the Diary of the Chief Plague Officer, dated Bangalore, 18th December 1898.

\* \* \*  
 No. I Ward Officer remarks that the case in his ward was imported from Sarjapur.  
 No. II reports that one of the three cases was imported from Sarjapur, and another from the Civil and Military Station.  
 No. IV does not make any observation.  
 Our main difficulty now lies in getting on fast with disinfection and I am paying particular attention to this. There is difficulty in getting chunam.

Extract from the Diary of the District Plague Officer, Bangalore, for the week ending 17th December 1898.

Tuesday the 13th December 1898.—Left Bangalore and rode out to Kaglipur. Since the outbreak of plague in this village there have been 19 attacks and 15 deaths. I am glad however to be able to say that since the 6th instant there have been *no more attacks*. This I consider is solely due to the fact that the village was completely evacuated by the people who are now living in huts in the fields. The roofs of infected houses have been removed in the village, and I have given instructions to have the floors dug up and burnt and all the houses in the place whitewashed before they are inhabited. There is not the least doubt that complete evacuation is the best of all remedies as has been proved in several cases now.

Extract from the Diary of the Chief Plague Officer, Bangalore City, dated 26th December 1898.

\* \* \*  
 There now remain 8 deaths in No. IV Ward; of these 3 occurred in Dodmavalli, viz., 2 from fever and from labor all particularly the former very suspicious, having regard to the fact that 2 plague cases are also reported from the same place; 1 death in Gangamacheri and 1 in Subbaraya Matt from fever are also very suspicious; 1 in Koracharapalya from dropy; 1 in Kumharpet from convulsions is suspicious; and 1 in Tigalarpet from old age. Enquiries will be made to-morrow about these deaths, but I have been so often disappointed in tracing them before that I do not hope for much success. There is however no doubt in my mind that a good proportion of these deaths are from plague which still exists in the outlying portions of our city and to which I fear people from adjoining infected localities flock without our knowledge. The supervisor in several places is still a fraud and the police equally bad.
